PROFIBUS Gateway

For Connecting EnDat Encoders

Encoders with EnDat interface for connection via gateway

All absolute encoders from HEIDENHAIN with **EnDat interface** are suitable for PROFIBUS-DP. The encoder is electrically connected through a **gateway**. The complete interface electronics are integrated in the gateway, as well as a voltage converter for supplying EnDat encoders with $DC\ 5\ V \pm 5\ %$. This offers a number of benefits:

- Simple connection of the field bus cable, since the terminals are easily accessible.
- Encoder dimensions remain small.
- No temperature restrictions for the encoder. All temperature-sensitive components are in the gateway.
- No bus interruption when an encoder is exchanged.

Besides the EnDat encoder connector, the gateway provides connections for the PROFIBUS and the power supply. In the gateway there are coding switches for addressing and selecting the terminating resistor.

Since the gateway is a bus member, the cable to the encoder is not a stub line, although it can be up to 40 meters long.

PROFIBUS DP

PROFIBUS is a nonproprietary, open field bus in accordance with the EN 50170 standard. The connecting of sensors through field bus systems minimizes the cost of cabling and reduces the number of lines between encoder and subsequent electronics.

PROFIBUS-DP profile

The PNO (PROFIBUS user organization) has defined a standard, nonproprietary profile for the connection of absolute encoders to the PROFIBUS-DP. This ensures high flexibility and simple configuration on all systems that use this standardized profile.

Self-configuration

The device identification records (GSD) completely and clearly describe the characteristics of the gateway in an exactly defined format. The GSD file can be downloaded from the HEIDENHAIN FileBase.

DP-V0 profile

This profile can be obtained from the Profibus user organization (PNO) in Karlsruhe, Germany, under the order number 3.062. There are two classes defined in the profile, where class 1 provides minimum support, and class 2 allows additional, in part optional functions.

DP-V1 and DP-V2 profiles

These profiles can be obtained from the Profibus user organization (PNO) in Karlsruhe, Germany, under the order number 3.162. This profile also distinguishes between two device classes:

- Class 3 with the basic functions and
- Class 4 with the full range of scaling and preset functions.

Optional functions are defined in addition to the mandatory functions of classes 3 and 4.

* Please select when ordering

¹⁾ EnDat encoders with the ordering designations EnDat01, EnDat02 and EnDat22 can also be connected. However, the information available via PROFIBUS is generated on the basis of the EnDat21 interface. The position value corresponds to the absolute value transmitted via the EnDat interface without interpolation of the 1 V_{PP} signals.

²⁾ Only in connection with the M23 input connector

³⁾ A mounting kit is available under ID 680406-01 for mounting on the existing holes of the ID 325771 gateway.

Supported functions

Particularly important in decentralized field bus systems are the **diagnostic functions** (e.g. warnings and alarms), and the **electronic ID label** with information on the type of encoder, resolution, and measuring range. But also programming functions such as counting direction reversal, **preset/zero shift** and **changing the resolution (scaling)** are possible. The operating time of the encoder can also be recorded.

Flange socket M12

PROFIBUS-DP and the power supply are connected via the M12 connecting elements. The necessary mating connectors are:

Bus input:

M12 connector (female), 5-pin, B-coded

Bus output:

M12 coupling (male), 5-pin, B-coded

Power supply:

M12 connector, 4-pin, A-coded

Accessory:

Adapter M12 (male), 4-pin, B-coded
Fits 5-pin bus output, with PROFIBUS terminating resistor. Required for last participant if the encoder's internal terminating resistor is not to be used.
